

QuietLeigh™ reduces noise, cost and waste

*Recycling Solutions
for Generations*

Without making a lot of noise about it, some automotive suppliers have embraced sustainability for years — producing their sound-attenuating components with QuietLeigh™ shoddy. Made from recycled denim and other textile materials. QuietLeigh™ is the industry standard for acoustical padding. It can help reduce vehicle noise while keeping tons of old jeans out of landfills.

Leigh Fibers custom-blends QuietLeigh™ shoddy to suit each customer's production process and components, such as floors, doors, speaker enclosures, closeout panels, and package trays. These unique materials meet automotive industry standards and OEM specifications... for flame retardancy as well as sound deadening.

As North America's only ISO-certified fiber reprocessor, Leigh is also uniquely

positioned to help customers recycle the scrap from their production and turn it into material they — or another company — can reuse. We are North America's leading reprocessor of fibers and textiles.

At Leigh, our business is diverting fiber waste from landfills (14 billion lbs. so far) and converting it into useful products that meet the specific needs of our customers. In addition to QuietLeigh™ fibers for sound attenuation, we supply the automotive industry with SafeLeigh™ recycled aramids that meet fire-retardant requirements.

For environmentally-friendly materials that meet the quality, performance and cost requirements of the automotive industry, Leigh Fibers is a global leader. We've been providing innovative solutions to automakers for over 40 years. Find out how we can help you — call Leigh today.
