

3 ways to meet FR requirements, all 100% recycled

Recycling Solutions for Generations

SafeLeigh™ FR (flame-retardant) shoddy is a high-quality fiber that meets automotive performance and fire-retardant standards while helping you meet sustainability goals.

SafeLeigh™ Premium — the purest grade with the highest meta-aramid level, available in colors

SafeLeigh™ is custom-blended of 100% recycled materials, primarily fire-retardant aramids. It's a proven product that helps you meet requirements for flame-retardancy without the expense (or drying time) of chemicals.

This innovative product is available exclusively from Leigh Fibers, North America's leading reprocessor of fibers and textiles. It's blended at our ISO-9001:2008-certified facility in South Carolina (1 million sq. ft.), known for quality and on-time delivery.

SafeLeigh™ shoddy is ideal for trunk liners, headliners, upholstery backing, acoustical components, and more. Choose from three grades:

At Leigh, our business is diverting fiber waste from landfills (14 billion lbs. so far) and converting it into useful products that meet the specific needs of our customers. In addition to SafeLeigh™ FR aramid blends, we provide the automotive industry with QuietLeigh™ fibers for sound attenuation, made primarily of recycled denim.

SafeLeigh™ — meets fire-retardant requirements at the lowest possible cost

SafeLeigh™ Natural — for higher-end applications demanding a whiter-looking product and a higher level of meta-aramids

For environmentally-friendly materials that meet the quality, performance and cost requirements of the automotive industry, Leigh Fibers is a global leader. We've been providing innovative solutions to automakers for over 40 years. Find out how we can help you — call Leigh today.
